**Getronics
Cloud Services**

Why do we need to talk about cloud?

2020 put cloud to the test when thousands of businesses had to reinvent their IT to maintain their productivity and survive the pandemic.

Today, cloud adoption growth continues to accelerate as companies look to innovate while addressing their top business priorities.

Security & Compliance

Privacy and regulatory issues, along with governance and compliance of cloud services, worry more than 60% of enterprises.

Increasingly, companies need to know where their data is located, ensure it's protected against cyberattacks, and that it meets both local and international regulations.

Resource Flexibility

Cloud solutions have proven to enable quicker implementation of new projects, allowing resources to adapt to changing business requirements more efficiently and in real-time.

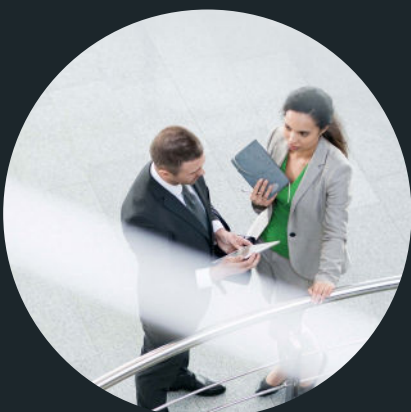

Availability and Always-on Experience

Clearly demonstrated at the beginning of the pandemic, where on-premise solutions suffered service disruptions (and so did their users) companies rely on their IT services to be always available and for users to be able to access them from any location or any device.

Cost & Resource Optimisation

Cloud solutions offer an OPEX model (monthly payment and back-to-back revenues entering the business), a much more attractive proposition against the traditional model of CAPEX (high one-off investments with uncertain payback). Automating repetitive, manual tasks allows your people to focus on more complex tasks; ultimately, focusing attention where it needs to be.

While business leaders are ready to grasp the true extent of what cloud has to offer – they often don't have the in-house skills and knowledge to turn their digital vision into reality.

Overcoming the complexity

Cloud migrations can be complex. Choosing the right partner can vastly reduce these challenges and allows you to reap the benefits of cloud – both quicker and risk-free.

Challenges of moving to the cloud

Data Integrity

Moving interconnected data requires considerable skills and repeated testing. In addition, privacy and regulatory issues, along with governance and compliance, are as challenging as they are critical in any migration plan.

Applications

Identifying the appropriate platform for each application and groups of dependencies is an essential part of any migration if the value of Cloud is to be realised.

Re-Platforming

Moving large databases to the cloud is complex and requires detailed planning, especially when it comes to efficiently weaving multiple different clouds together in a way that doesn't hinder productivity or innovation.

Operations

Maintaining systems operations during the migration can require an overlap of live systems with Sync processes being implemented.

Key benefits of Getronics cloud

Service Levels

Service levels to suit the criticality of your workloads. Getronics can provide fix as well as response SLAs.

Platform Isolation

Where isolation is required for security or performance, Getronics offers the flexibility to isolate some or all of the cloud infrastructure components.

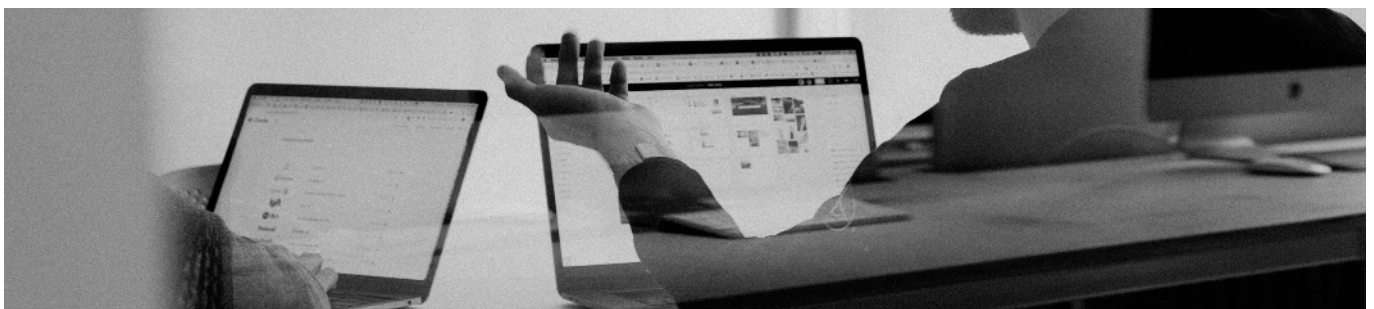

Self-Service or Fully Managed

Cloud platforms at your disposal to suit any business-critical application requirement.

Security

Secure-by-design cloud architectures with security built-in from the ground up and the scalability to implement new real-time security analytics.

Simple, compliant, and fit for purpose

Getronics Cloud services

At Getronics, our goal is to make your cloud journey as simple as possible.

Our team of experts is here to help you in any way your business needs from initial concept right through to execution and beyond. We make our solutions, your solutions; fully adaptable to the requirements of your business, technology and service model.

Cloud readiness assessment

Large-scale migrations require significant preparation, including thorough planning and careful analysis to enable a flawless migration execution and minimum to zero downtime.

Our assessment services cover prioritisation to migrate large application estates, provide visibility into application complexities and dependencies, and determine the suitability and migration sequence. It will also help you determine which applications need to be transformed and how.

Cloud migration services

A successful migration is the first step for achieving the full benefits of cloud. At Getronics, we have developed a repeatable and detailed approach for each migration pattern (5Rs), including a reusable plan and artifacts to execute at scale.

Our team of local experts will help you in all steps of this journey. From choosing the right strategy to planning and execution, ensuring your successful and cost-effective move to the cloud.

Cloud services

When it comes to critical business workloads, it's never a one-size-fits-all. Getronics provides dedicated private-use infrastructure, in-country hosting capability, very high enterprise SLAs, pay-as-you-go capacity expansion, and seamless migration between on-premise and private cloud.

We will help you design, provision, implement and support across private and public cloud solutions while providing ITIL compliant managed services across.

On-premise data centre services

On-premise Data Centre services provide an alternative to private and public clouds for those workloads that need to remain in your data centre. You will get all the advantages of managed infrastructure hosted in your own data centre, and with the option to expand capacity where required.

Data protection services

Getronics' SLA-backed data protection services are designed to meet your target recovery time and recovery point objectives. Through regular, simulated failovers, we provide increased business confidence against localised errors and larger regional disasters.

Why Getronics for Cloud Services

Secure-by-design

All of our services are secure-by-design. This includes our data centre and cloud solutions, which are designed, built, and managed with the support of our dedicated security teams, making them highly resilient and cyber secure.

Your data around the corner

Whether public or private, hybrid or multi-cloud, Getronics' guarantees you'll remain compliant with local and international regulations.

In addition, our local footprint ensures lower latency making real-time operations possible.

From colo to cloud-native

With Getronics, you can count on an end-to-end cloud adoption journey – at your own pace and in line with your business. From colocation and traditional data centre managed services, to private and public cloud environments, we have the capabilities and know-how to help you thrive.

What's more, thanks to our extensive cloud-native applications team, we will enable you to unlock the cloud's full potential and benefits for your business.

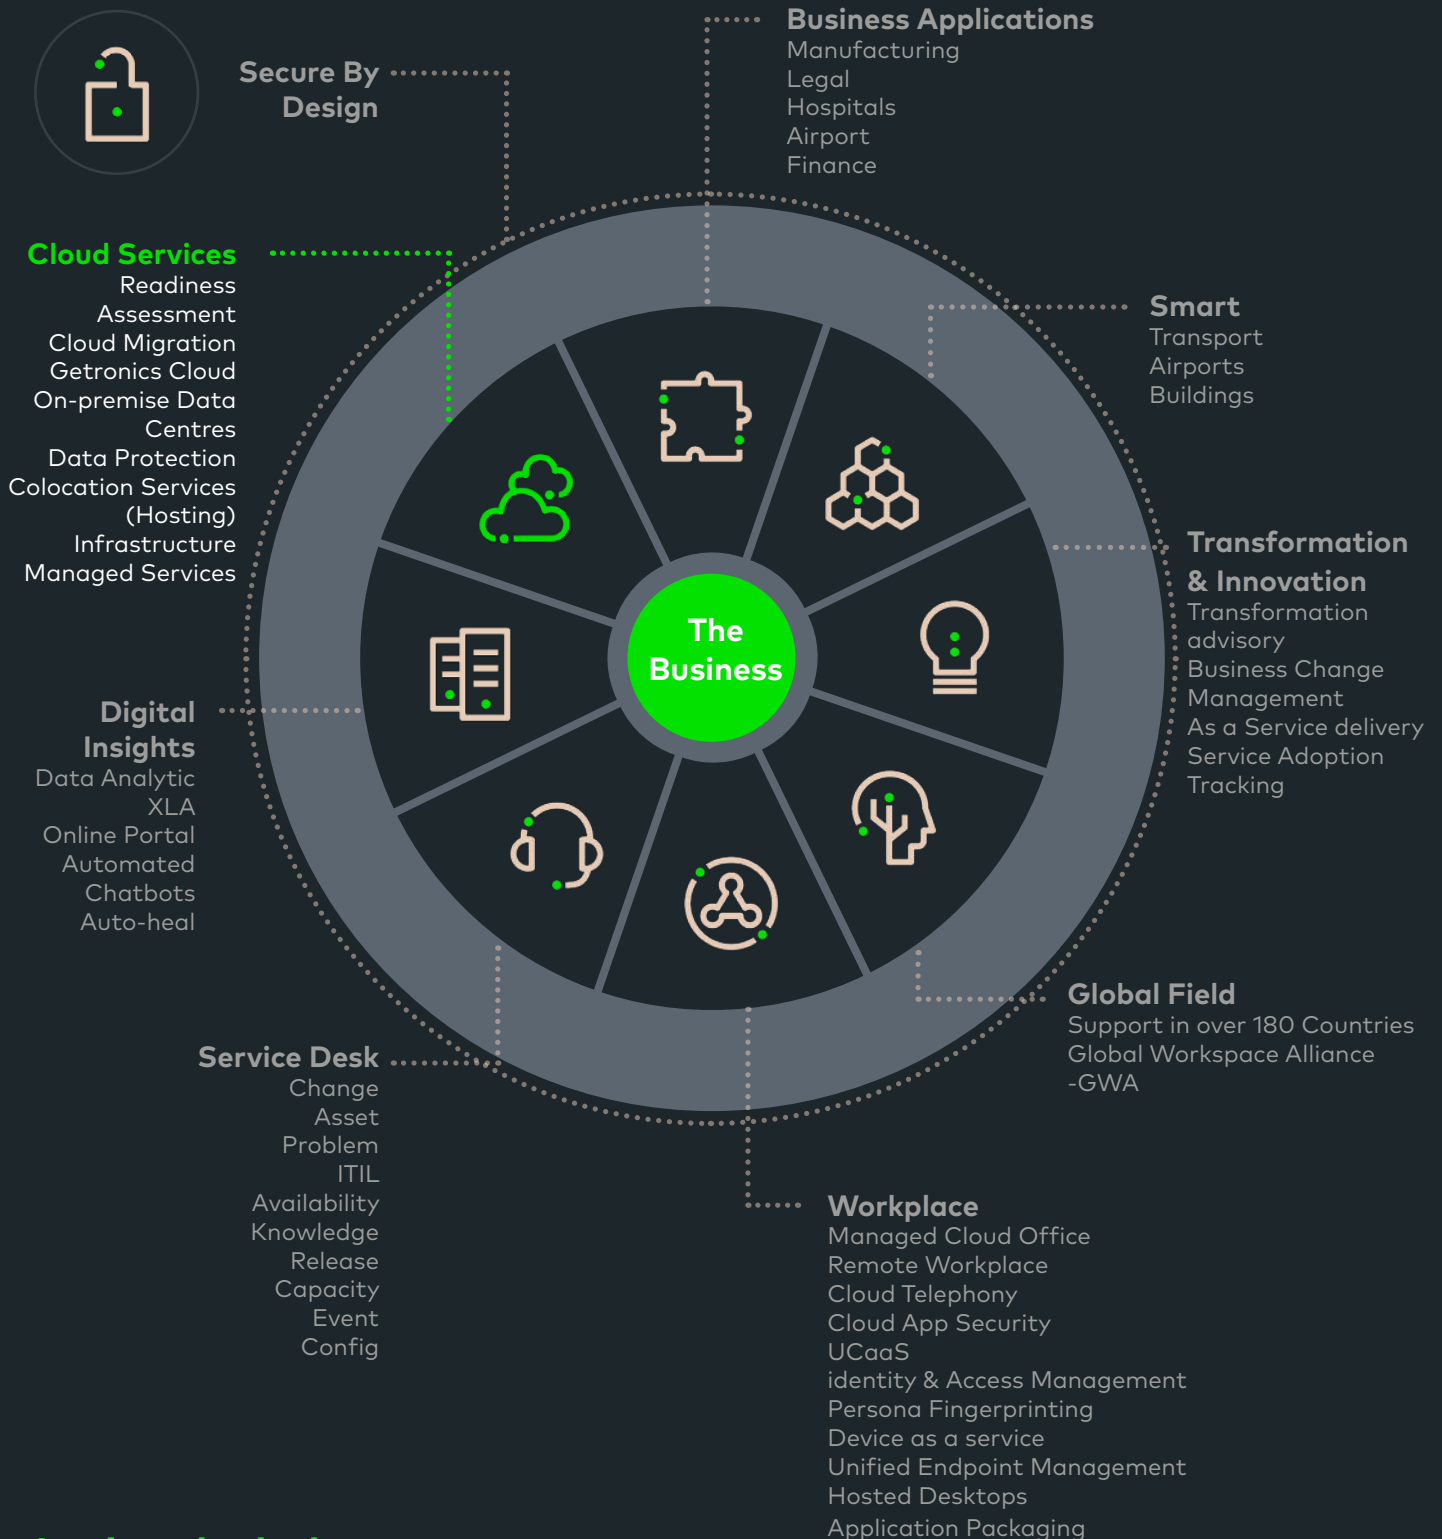

Vendor agnostic

We have maintained our independence to ensure that we can assist our clients in designing and implementing solutions to fit their specific requirements.

With Getronics, you will benefit from the right mix of vendor platforms and solutions, delivered as a single solution, service level agreements, and contract.

Bringing it all together

Let's unlock the power of cloud
